

Dr. Khanade Hospital

Please read over this material carefully. While instructions may vary from patient to patient, the material should provide you with a general idea of things to do to help you get well after your surgery.

Responsibilities of Family and Friends

1. Dr. Khanade Hospital staff will ask that when you are visiting patients to be respectful of other patients and their right to privacy.
2. There may be times when you are asked to temporarily leave the room to ensure the privacy and safety of the patient(s) during certain procedures or discussions.
3. You are asked to work together with staff so that their presence does not limit safe access to any patient at any time.
4. If you have a cold, diarrhoea, viral illness or are generally feeling unwell we ask that you do not visit, to prevent the spread of infection.
5. Rarely, the hospital may need to limit family presence (in response to public health and / or hospital safety or security concerns); e.g. If a patient is being nursed in contact isolation, access to the patient may be limited and they will be provided with personal protective equipment to wear. The hospital will keep patients and families informed and ensure that these limitations are kept to a minimum.
6. Children supervised by a parent/caregiver are welcomed. They should remain with the supervising adult, whose responsibility it is to ensure a safe and restful environment for patients is not compromised by their presence.
7. Please don't touch any equipment or tubing associated with the patient's treatment or care. If you have concerns, please ring the bell for the nurse.
8. Any incidents or accidents must be notified to staff who will complete an incident report.
9. Where a person's behaviour creates a direct risk or threat or is disruptive of the functioning of the ward, they will be asked to leave the premises. Security and/or the Police will be notified and may be asked for support, depending on the situation.
10. Dr. Khanade Hospital is a smoke, vape and drinking free campus.
